

# CSE 232: Assignment 2

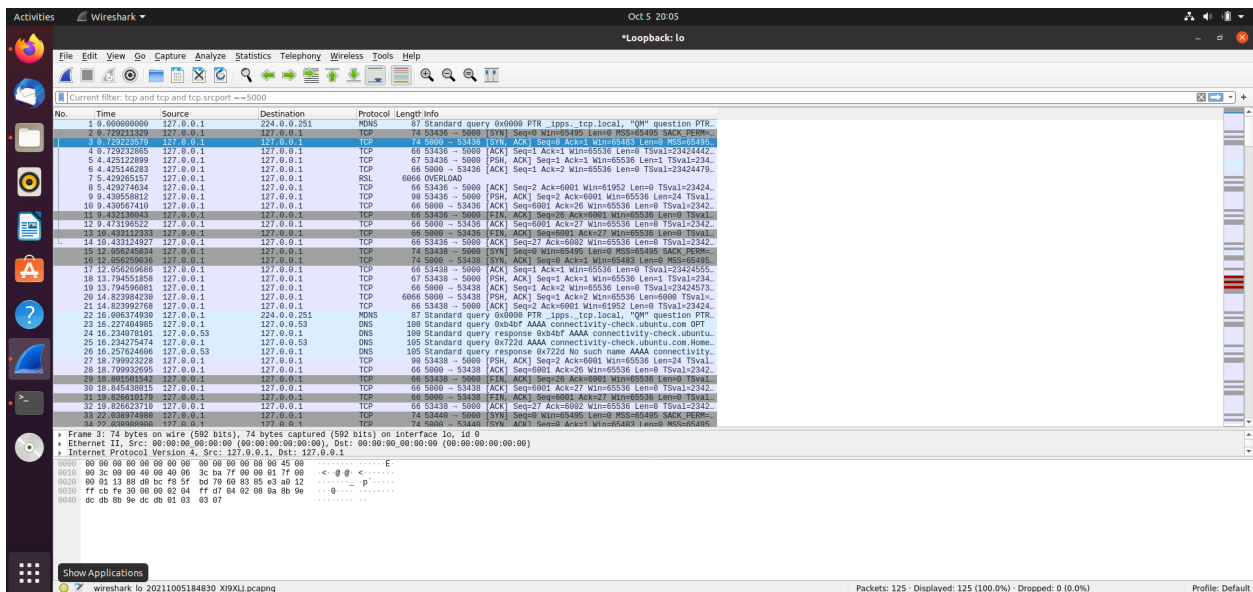

Name - Utkarsh Dubey

Roll no - 2019213

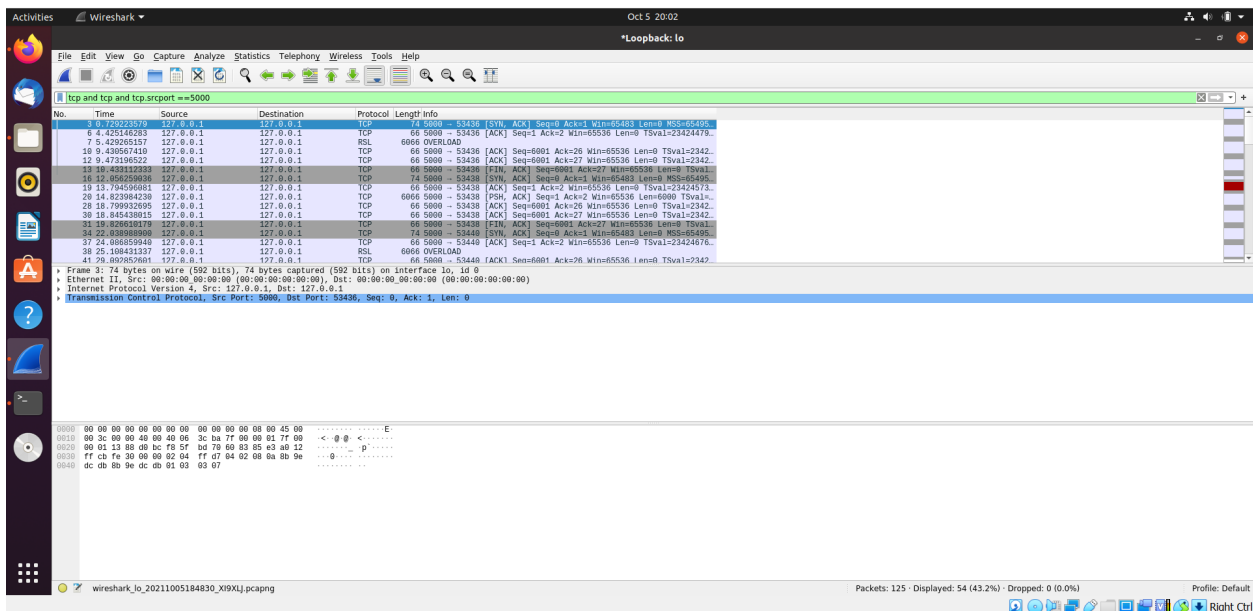

## Question 1 -

Started server and client programs for 2 mins

Wireshark packet collection

## Applying filters -

## Plot -

## Question 2 -

- We received 4 packets of HTTP type when we loaded the given site.

### First Packet

Http request type - GET

User-agent type - Mozilla/5.0

Name and version of web browser - Chrome/94.0.4606.71

### Second Packet

Http code response - 200

Http response description - OK

### Third Packet

Http request type - GET

User agent type - Mozilla/5.0

Name and version of web browser - Chrome/94.0.4606.71

### Fourth Packet

Http code response - 200

Http response description - OK

Capturing from Wi-Fi

## Question 3

Ans a -

Windows (ipconfig is equivalent of ifconfig in windows)

```

C:\Users\Utkarsh>ipconfig

Windows IP Configuration

Unknown adapter OpenVPN Wintun:

    Media State . . . . . : Media disconnected
    Connection-specific DNS Suffix  . :

Ethernet adapter VirtualBox Host-Only Network:

    Connection-specific DNS Suffix  . :
    Link-local IPv6 Address . . . . . : fe80::9d4a:d488:c243:d3dc%7
    IPv4 Address. . . . . : 192.168.56.1
    Subnet Mask . . . . . : 255.255.255.0
    Default Gateway . . . . . :

Unknown adapter Local Area Connection 2:

    Media State . . . . . : Media disconnected
    Connection-specific DNS Suffix  . :

Wireless LAN adapter Local Area Connection* 3:

    Media State . . . . . : Media disconnected
    Connection-specific DNS Suffix  . :

Wireless LAN adapter Local Area Connection* 12:

C:\Users\Utkarsh>

```

## Ubuntu (ifconfig)

```

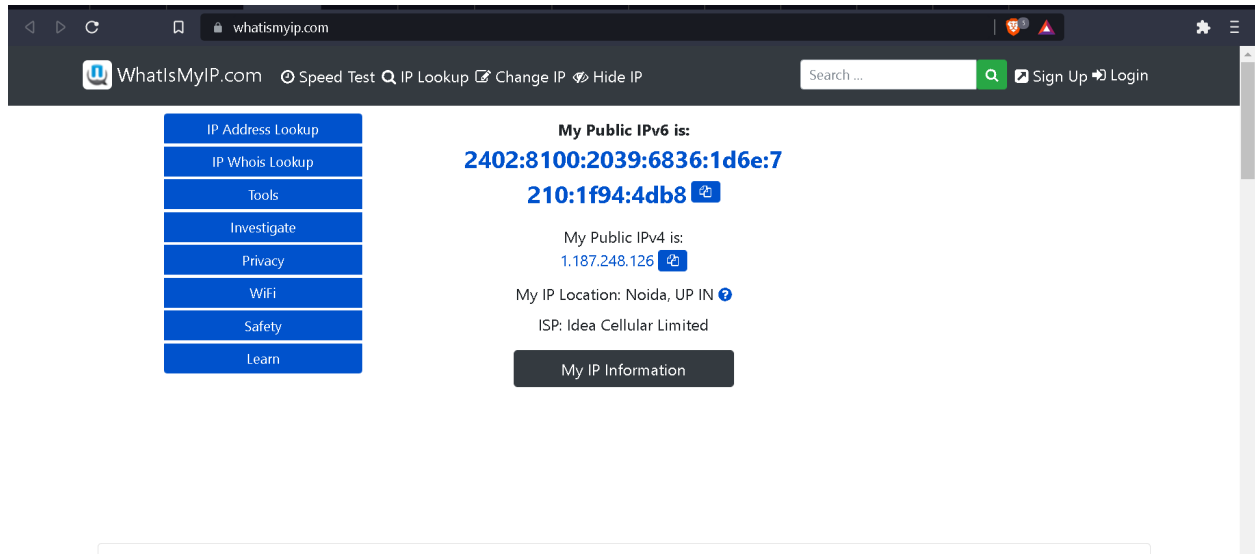

Processing triggers for Man-db (2.9.1-1) ...
utkarsh@utkarsh-VirtualBox:~$ ifconfig
enp0s3: flags=4163<UP,BROADCAST,RUNNING,MULTICAST> mtu 1500
    inet 10.0.2.15 netmask 255.255.255.0 broadcast 10.0.2.255
    inet6 fe80::79ce:c25f:5a8e:4d7b prefixlen 64 scopeid 0x20<link>
    ether 08:00:27:e1:3f:72 txqueuelen 1000 (Ethernet)
    RX packets 43694 bytes 61416395 (61.4 MB)
    RX errors 0 dropped 0 overruns 0 frame 0
    TX packets 11682 bytes 753934 (753.9 KB)
    TX errors 0 dropped 0 overruns 0 carrier 0 collisions 0

lo: flags=73<UP,LOOPBACK,RUNNING> mtu 65536
    inet 127.0.0.1 netmask 255.0.0.0
    inet6 ::1 prefixlen 128 scopeid 0x10<host>
    loop txqueuelen 1000 (Local Loopback)
    RX packets 226 bytes 21817 (21.8 KB)
    RX errors 0 dropped 0 overruns 0 frame 0
    TX packets 226 bytes 21817 (21.8 KB)
    TX errors 0 dropped 0 overruns 0 carrier 0 collisions 0

```

Observation - we see many IP addresses for different network adapters like ethernet and wifi.

Ans b -

They are different, as what I see on the website is my public IP and what I see on the terminal is my private IP which is of local my machine.

It is different because my local machine uses its IP to connect to the router for and router then connect to a bigger network like an ISP, which has its own IP and that IP is used to further connect to the websites.

### Question 4 -

Ans a -

Command - ping [www.iiitd.ac.in](http://www.iiitd.ac.in) -M do -s 2972  
2972 for 3000 bytes

[illegible]

The standard MTU size is 1500 bytes, that's why even after sending 3000bytes we can observe a mtu of 1500.  
Hence we can't send a packet with mtu 3000.

Ans b -

## Command - netstat -at -tp

```
utkarsh@utkarsh-VirtualBox:~$ netstat -at -tp
(Not all processes could be identified, non-owned process info
will not be shown, you would have to be root to see it all.)
Active Internet connections (servers and established)

```

Proto	Recv-Q	Send-Q	Local Address	Foreign Address	State	PID/Program name
tcp	0	0	localhost:domain	0.0.0.0:*	LISTEN	-
tcp	0	0	localhost:ipp	0.0.0.0:*	LISTEN	-
tcp6	0	0	ip6-localhost:ipp	:::*	LISTEN	-

```
utkarsh@utkarsh-VirtualBox:~$ S
```

## Question 5-

Ans a -

```
utkarsh@utkarsh-VirtualBox:~$ nslookup -type=soa instagram.com
Server:      127.0.0.53
Address:     127.0.0.53#53

Non-authoritative answer:
instagram.com
  origin = ns-384.awsdns-48.com
  mail addr = awsdns-hostmaster.amazon.com
  serial = 3
  refresh = 7200
  retry = 900
  expire = 1209600
  minimum = 3600

Authoritative answers can be found from:

utkarsh@utkarsh-VirtualBox:~$ nslookup instagram.com ns-384.awsdns-48.com
Server:      ns-384.awsdns-48.com
Address:     205.251.193.128#53

Name:   instagram.com
Address: 31.13.71.174
Name:   instagram.com
Address: 2a03:2880:f203:1e6:face:b00c:0:4420
```

Mostly if we do nslookup on popular websites, we will end up getting a non-authoritative response.

Now in order to get their authoritative response, we need to specify the origin server and we got the origin server by using -type=soa flag

then we ran nslookup on that server, in the case of Instagram it was ns-384.awsdns-48.com

Ans b -

```
C:\Users\Utkarsh>nslookup -type=soa www.instagram.com
Server:      TP-LINK.Home
Address:     192.168.1.1

Non-authoritative answer:
www.instagram.com      canonical name = z-p42-instagram.c10r.instagram.com

c10r.instagram.com
  primary name server = a.ns.c10r.instagram.com
  responsible mail addr = dns.facebook.com
  serial = 1633454345
  refresh = 300 (5 mins)
  retry = 600 (10 mins)
  expire = 600 (10 mins)
  default TTL = 300 (5 mins)
```

We got TTL of 5mins, meaning that it will expire in 5 mins. TTL stands for time to live and it is an expiration time on DNS record.

## Question 6 -

Ans a -

```
C:\Users\Utkarsh>tracert iiit.ac.in

Tracing route to iiit.ac.in [196.12.53.50]
over a maximum of 30 hops:

  1    1 ms    2 ms    1 ms    TP-LINK.Home [192.168.1.1]

Ping statistics for 196.12.53.50:
    Packets: Sent = 100, Received = 98, Lost = 2 (2% loss),
Approximate round trip times in milli-seconds:
    Minimum = 43ms, Maximum = 715ms, Average = 215ms
```

Average latency = 215ms

Ans c -

After adding all the intermediate latency in part we get 1200.96ms.

This is way different from the average latency we got in part b which was 215ms.

This is because the latency in part a between intermediate host is a round trip time of packet to get to that host and back to my computer, hence we can't directly add the latency of intermediate to get the return time to the final host.

Ans d -

The maximum latency value I got in part a was 114.66 ms and the average in part b is 215ms.

Hence we observe they are not same.

This is happening because we might not have bottlenecks, and the latency gradually increases as we go along, Hence we only get the average latency of the host almost similar to that in part b

Ans e -

C:\Users\Utkarsh>
```

```
C:\Users\Utkarsh>nslookup 115.242.184.26
Server: TP-LINK.Home
Address: 192.168.1.1

Name: 115.242.184.26.static.jio.com
Address: 115.242.184.26
```

```
C:\Users\Utkarsh>nslookup 10.43.147.37
Server: TP-LINK.Home
Address: 192.168.1.1

*** TP-LINK.Home can't find 10.43.147.37: Non-existent domain
```

## Question 7

Disabled the looping interface using ifconfig lo down and this causes the driver to shut down.

```
utkarsh@utkarsh-VirtualBox:~$ sudo ifconfig lo down
[sudo] password for utkarsh:
```

and then pinging the localhost

```
utkarsh@utkarsh-VirtualBox:~$ ping 127.0.0.1
PING 127.0.0.1 (127.0.0.1) 56(84) bytes of data.
^C
--- 127.0.0.1 ping statistics ---
168 packets transmitted, 0 received, 100% packet loss, time 171810ms

utkarsh@utkarsh-VirtualBox:~$
```

As we can see, we got 100% packet loss
